Northland Community and Technical College

Northland Community and Technical College is seeking a SimMan Manikin.

ADDENDUM NO. 1

The Proposal due date of August 5, 2021 will not change as a result of this Addendum.

CLARIFICATIONS/QUESTIONS:

The manikin needs to be able to run on the same software that our sim lab currently uses. We are requesting one that is built specifically for respiratory therapy training. It needs a lung module that can change the dynamic of the chest to simulate real life patient breathing problems. This module also needs to allow us to apply all our different types of positive pressure devices, I.E. Ventilators and Bipaps, and obtain readings like they were on an actual patient. The manikin needs to be set to have different respiratory issues that will respond in real time on our machines and if the student makes a ventilator change that is incorrect the manikin will show the adverse effects, just like humans, without having to practice on people.

The above ADDENDUM shall be attached to and become part of the bid. Receipt of this Addendum shall be acknowledged by including it with the bid. Failure to do so may subject BIDDER to disqualification.
